

Well Spring Wind Energy Program - Great River Energy

Goodhue County Cooperative Electric through Great River Energy has wind generation available.

This offers our members the opportunity to receive all or part of their energy from a renewable, environmentally-friendly resource. It also demonstrates GRE's and Goodhue County Cooperative Electric's commitment to the environment and to meeting the power demands in our service area.

Goodhue County Cooperative Electric members can voluntarily participate in Wellspring® Renewable Wind Energy by agreeing to pay slightly more for every 100-kWh block of energy they sign up for.

In response to customer requests for more renewable energy resources, Goodhue County Cooperative Electric, through its power supplier, Great River Energy recently added an additional 100 megawatts of new wind energy.

If you are interested in purchasing some of your electricity from Wellspring, please call 507-732-5117 or 1-800-927-6864 and a Customer Service Representative will assist you.
